

Short Programming Round (Round 2)

Total Time : 3hours Total Questions: 4 to 5 questions

Sample Question:

1. Arrange the given numbers in the decreasing order of their number of factors.

Input:

4,2,8,16,5

Output:

16,8,4,5,2 (or) 16,8,4,2,5

- 2) Given two strings of same length, print the characters which does not match in the two strings.

Input:

abcde**f**eghijklm
abcdu**a**bihijkim

Output:

eufaebgili

- 3) Find whether the given number is a binary palindrome or not. (Do not use string or array).

Input:

5

Output:

YES

Explanation: 5 – Binary Representation : 101 which is a palindrome.

- 4) Assume a two dimensional string array with the following inputs of each row input as Child, Father relationship. For a given name, find the number of GrandChildren for that name.

Sample Input Data :

```
["Ram","Ravi"]  
["Prem","Ravi"]  
["Rahul","Ram"]  
["Gokul","Rahul"]  
["Vignesh",Gokul]  
["Siva","Prem"]  
["Priya","Ram"]
```

Test Case 1:

Input: Rahul

Output: 1

Test Case 2:

Input: Ravi

Output: 3

Points to be noted while preparing for short programming round:

1. Practice pattern printing programs a lot.
2. Derive more than 1 solution for the problem as it helps to optimize the solution.
3. Practice solving problems in

Long Programming Round (Round 3 -> 3 hours)**Sample Question:**

Build an Invoice Generation Application which allows to

1. Create Customer with unique Id and other details (password authentication not required)

2. Create Product which needs to be displayed while shopping.
3. Login to the shop using a valid userId and do shopping.
4. After shopping, generate an invoice for that order.
5. Display the list of invoices for a particular user and also maintain a list all invoices so that a particular invoice can be displayed based on the InvoiceID without taking user into consideration.

Points to be noted while preparing for Long programming round:

1. Focus should be mainly on the design of the application. It should be modular.
2. Here candidate will be tested on the OOPS concepts. Make sure you create sufficient classes to structure the data for this round.
3. Many more changes will be suggested, as the application is being built and that is why it should be modular.

Next round will be face to face Technical round.
