Zoho Corporation - Programming Test

1. Write a program to print the below pattern.

Input: 5

Output:

```

                1
              2  3
            4  5  6
          7  8  9 10
        11 12 13 14 15
```

2. Write a program to traverse an array from left to right and replace each number with the next greater number present within the remaining elements from its position. For example, from (4, 9, 23, 7) the next greater number to 4 is 7. If no such number is found, then replace the remaining array elements with -1.

Examples:

Input: 2,5,7

Output: 5,7,-1

Input: 2,4,8,90,77,54

Output: 4,8,54,-1,-1,-1

Input: 2,-1,0,-1,3

Output: 3,0,3,3,-1

3. From the given unsorted integer array, find the pair(s) of elements that have the smallest absolute difference between them. If there are multiple such pairs then find them all.

Examples:

Input: [20, 30, 120, 240]

Output: [20, 30]

Input: [5, 4, 3, 2]

Output: [2, 3], [3, 4], [4, 5]

Input: [11, 15, 24, 9]

Output: [11, 9]
