ZOHO Corp Interview Experience

Gokul S - AIML (Batch 2025)

Round 1: Written Test - Programming and Aptitude

Round 2: Short Programming (On machine)

Round 3: Long Programming (On machine)

Round 4: HR Round

Round 1 - 75 minutes:

- The first round is written test on paper, NOT MCQ's they provide the question paper and answer sheet, we need to fill the correct answer in the given answer sheet
- There are **2 parts** in question paper, 10 Programming Questions and 10 Aptitude Questions.

1st part - Programming Questions - 40 minutes.

- Which is fully find the output questions, there is no negative marks and there is no errors in the syntax or logic.
- The questions are all in Java Programming Language, mostly from Loops and Recursion, if you know the flow of the program it will be easy only

2nd part - Aptitude Questions - 35 minutes.

- The Aptitude Questions are quite easy to solve, just basic logic questions.
- The Most of the Questions are repeated from the previous year question paper in the internet.
- I just go through it for 10 minutes and 4 questions are from that only.
- So not need to prepare that much for aptitude.

Round 2 - 75 minutes:

- Second round is Short Programming round , in that they are given 5 questions , who have solved 4 questions are selected to next round
- I'm asked with 1 easy and 4 moderate questions, they said code directly, after some time they review our code.

- **Question 1 (Easy):**

There are N players in shuffled order, if they are in ascending order, the middle one got the purple cap, find who is having the purple cap in the given array.

Ex:

Input :[5.5,2.3,1.4,3.4,4.2]

Output : 3.4

I used sorting the array and print the middle one

- **Question 2 (Moderate):**

There is an Array of Strings having anagram Twins, if there are more than 2 anagrams don't print it.

Ex:

Input :["Maya", "Aaym", "Gokul", "Lukog", "Kogul"]

Output : Maya Aaym

Here Gokul is anagram of 3 strings so don't print it.

I solve this question after 3 attempts of creating new logic, but not that much hard

- **Question 3 (Moderate):**

Find the Islands , given a 2D array you have to find the island location.

Ex:

Input :[[1,1,0,0],
[0,0,1,0]]

Output : [(0,0),(0,1)],[(1,2)]

I Don't have time to solve it

- **Question 4 (Moderate):**

Find the Longest Palindromic Substring.

Ex:

Input : "Revives"

Output : "evive"

I solved it by Brute Force Approach

- **Question 5 (Moderate):**

Given an array find the equilibrium position , element i is equilibrium if $\text{arr}[0 \text{ to } i-1] == \text{arr}[i+1 \text{ to } n-1]$.

I solved it by Brute Force Approach first, it takes $O(n^2)$ complexity. After they asked me to reduce the complexity, i reduced it to $O(n)$.

NOTE : In any of this questions they wont give the array size to get the array elements, i first tried it in Java , but i dont know how to get the array without size in Java, so i switched to Python.

Round 3 & 4:

- In round 3 onwards we are separated by 5 batches and we are allocated to separate teams, each teams have different approach to ask the questions.
- For me after 2nd round , 3rd , 4th and 5th round(not sure if it is 5th), all happend in the same place only, i sit in the same chair from morning to evening and finished all the rounds.
- In my batch, they sit near to me and tell the first program, they just say code directly.
- **1st Program:**
 - Given a sorted array find the kth elements next largest number.
 - I solved it using binary search algorithm and they ask me what is the time complexity I said $O(\log n)$ and gave me another question
- **2nd Program:**
 - He show me the Gold Mine searching program from the geeks for geeks , he showed me in his phone and ask me to copy the sample input and output.
 - Problem : <https://www.geeksforgeeks.org/gold-mine-problem/>

- I solved it using recursion ,on the first go only i used to manage all of the edge cases ,so he directly sent another person to interview
- In the next Round , he asked me to bring the resume,
 - **1st** - what the languages you known? -> I said c/c++ - basic; java, python - advanced.
 - **2nd** - why are you coded in python instead of java? - > I said , recently I am completed 2 projects in python so the syntax is more familiar than java, he said ok
 - **3rd** - in my area of interest i put OS, Networking, he asked about what is paging in the OS, i asked him is it partition indexing, he said the answer like , paging is the one who decides the memory allocation of the OS.
 - **4th** - He asked about TCP and UDP i said the basic , difference, and i said i know IP address well , he asked about me i said like IP is an address for the systems network card in a network , like sim number in mobile , he said ok.
 - **5th** - He asked me what multiplayer game you playes i said Free Fire , he asked me to draw a RDBMS schema for the games session. I draw a basic schema for the with 5 tables, and then asked me to write a query to get top hundred players of the week , I write a query using joining the three tables , and then he point out me to another person to ask questions.
- I dont know it is the same round or next round due to it happens in the same time.
 - **1st** - he asked about my self, and my native
 - **2nd** - he askd about where did you use firebase in your project.
 - **3rd** - he asked me about the paging in OS, as the previous person tell me the answer so i managed to answer the same
 - **4th** - he gave me a program to solve
The Program : Given 2 strings normal string and a regular expression string , the regex only contains 2 symbols with characters, '*' is for match all the characters and '?' to match any one character.

Ex: "Apple"

- "A*le" -> Match
- "A*" -> Match
- "A*f" -> Not Match
- "*" - > Match
- "A?ple" -> Match

It takes me 2 hours to complete , they test the code intensively with some random test case it failed 3 times , in the 3 fails they ask me code the logic to solve this , i solved it finally.

After Successful completion of all the rounds I got shortlisted for the final list of 9 members for this year summer internship.

Zoho is not looking for shortlist based on number of person needed, they shortlisted based on the performance only, i felt like i dont need to do well than my nearby person , i just need to do well.

Important thing: Go through the previous year questions to solve the first round, other rounds may vary for each zoho team.
